# MOTIVATION

- Variational autoencoders
  - help learn the variations in the different classes in the data.
  - but are not viewpoint invariant.
- Capsule networks
  - Learn a relationship between objects and its parts, thus learning a transformation invariant model.
- *Capsule networks in representation learning has not been examined under the VAE settings*

# CAPSULES FOR REPRESENTATION LEARNING

- Capsules replace scalar neurons in networks with vectors
  - Helps implicitly capture information such as orientation
- A capsule represents a feature, and the vector represents its likelihood
- Capsules helps build a hierarchical relationship → part-whole relationship

# PROPOSED APPROACH

- Novel capsule based variational capsule encoder (B-Caps)
  - Fully connected layers in the encoder are replaced with capsule layer
  - Capsule layers, mean and variance, influence the latent space sampling

# PROPOSED APPROACH

- Decoder network is from the basic VAE with fully connected layers.

# EXPERIMENTS - DATA

- MNIST dataset
  - 60000 training images – 10 classes/digits
  - 10000 test images
- FASHION-MNIST dataset
  - 60000 training images – 10 classes
  - 60000 test images

# RESULTS

Basic VAE

B-Caps

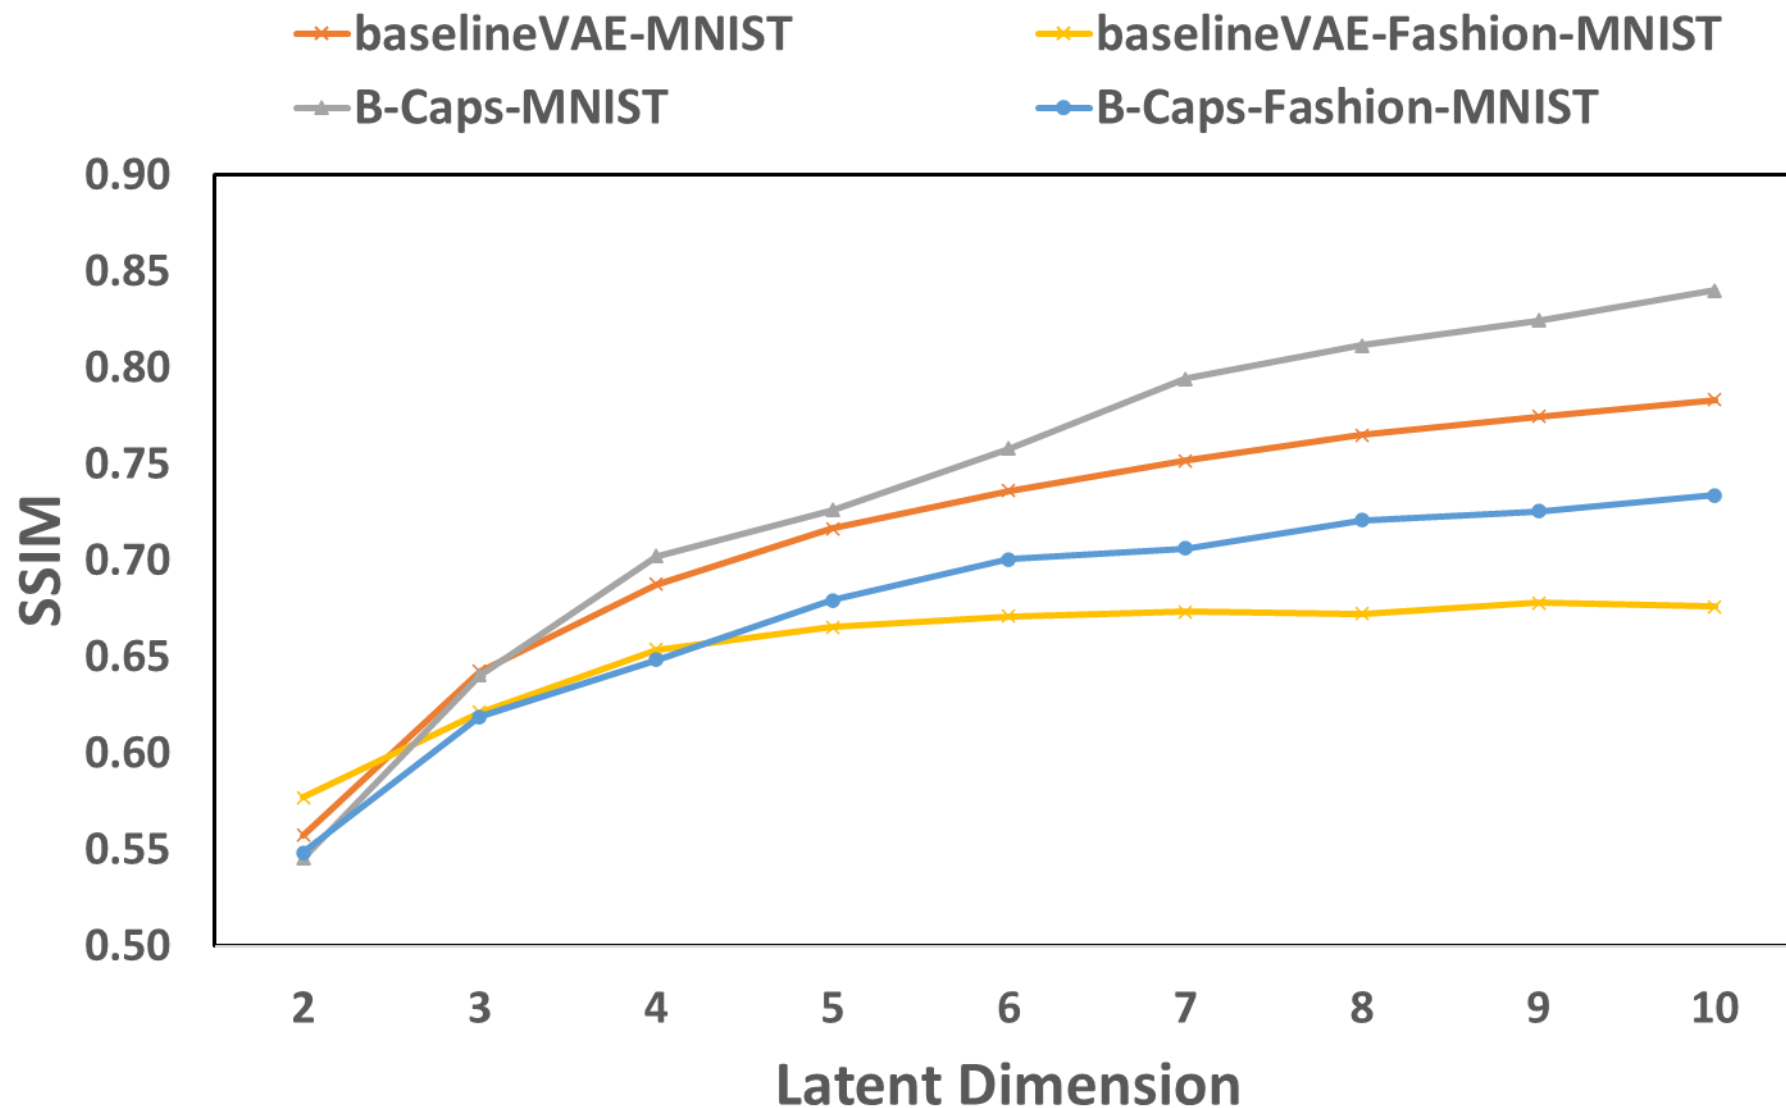

# RESULTS

COMPARISON OF RECONSTRUCTION QUALITY ON MNIST WHILE VARYING THE CAPSULE TYPES ( $C$ ) AND DESCRIPTION LENGTH ( $D$ ). STD - STANDARD DEVIATION.

| Model         | Capsule types ( $C$ ) | Description length ( $D$ ) | SSIM mean $\pm$ std $\uparrow$      | MSE mean $\pm$ std $\downarrow$     |
|---------------|-----------------------|----------------------------|-------------------------------------|-------------------------------------|
| Baseline VAE  | —                     | —                          | $0.555 \pm 0.154$                   | $0.041 \pm 0.019$                   |
| B-Caps        | 8                     | 64                         | $0.541 \pm 0.144$                   | $0.043 \pm 0.020$                   |
| <b>B-Caps</b> | <b>16</b>             | <b>64</b>                  | <b><math>0.580 \pm 0.133</math></b> | <b><math>0.040 \pm 0.017</math></b> |
| B-Caps        | 32                    | 64                         | $0.573 \pm 0.147$                   | $0.041 \pm 0.019$                   |
| B-Caps        | 8                     | 128                        | $0.529 \pm 0.152$                   | $0.046 \pm 0.020$                   |
| B-Caps        | 16                    | 128                        | $0.577 \pm 0.129$                   | $0.040 \pm 0.018$                   |

# QUANTITATIVE RECONSTRUCTION MEASURE

# QUALITATIVE RECONSTRUCTION

- Comparing the reconstruction quality of VAE vs B-Caps on Fashion-MNIST

# CLASSIFICATION RESULTS

- Train SVM to classify reconstructed images

# CLASSIFICATION RESULTS

# SUMMARY

- Proposed novel **variational capsule encoder** which helps learn a potentially stronger latent space.
- Even in a shallow network, B-Caps can learn a more representative latent feature space compared to VAE.
- B-Caps has superiority in learning latent attributes in more complex datasets (FASHION-MNIST) compared to baseline VAE.

# Thank you!
